

World's first AI doctor to fight against Covid-19

AI based VideoBot

Greetings from MSH

An AI based VideoBot for CoronaVirus, powered by patent protected CoRover Cognitive AI Framework, which is being used by 200 Million+ users in 187 countries is developed by [CoRover.mobi](#).

This is the World's first AI VideoBot, where a qualified doctor (infectious Disease Physician) answers queries related to Covid-19 in many Indian & foreign languages, with Voice & Text as well. Languages which we are supporting now are English, Tamil, Hindi, Marathi, Bengali, Urdu, Telugu, Kannada, Chinese, Arabic, French, Spanish and more.

This will help citizens to seek quick, precise and authentic information (based on the content from WHO), and also help cope up with the mental stress during isolation.

It's free to use for all. [CoRover.mobi](#) is a Startup and their Co-Sell partner Microsoft & Open-Innovation Partner Accenture are also supporting this initiative.
